

3.3V LDO

INDICATORS

The diagram shows two separate LED indicator circuits. The first circuit, labeled D2 LED, consists of a 3.3V voltage source connected in series with a resistor R11 (2k) and the LED D2. The second circuit, labeled D3 LED, consists of a 10V voltage source connected in series with a resistor R12 (2k) and the LED D3. Both LEDs are connected to ground (GND).

JST-1mm-Socket

Pin	Signal
1	GND
2	VCC
3	ESC_1
4	ESC_2
5	ESC_3
6	ESC_4
7	GND
8	CURR

The top diagram shows SW1 connected to the EN pin. A +3.3V supply is connected to SW1 through resistor R4 (10k). SW1 is also connected to the EN pin through resistor R5 (100k). A capacitor C7 (.1uF) is connected between the EN pin and GND.

The bottom diagram shows SW2 connected to the 100 pin. A +3.3V supply is connected to SW2 through resistor R6 (10k). SW2 is also connected to the 100 pin through resistor R6 (10k). A capacitor C8 (.1uF) is connected between the 100 pin and GND.
